

HD MAX SERIES

The HD MAX telephones were designed for the hard-hearing and for the visually impaired people. Some models are perfectly suited for people losing their memory or for those living alone who might be in need of an emergency rescue call at any time. All of the HD MAX Series telephones are hearing aid compatible. They can all be desk or wall mounted.

HD MAX and HD MAX AMPLI

- Extra large keypad with large digits and Braille dots (both for letters and digits).
- Adjustable incoming voice volume and tone (up to +30dB for the HD MAX and up to +40dB for the HD MAX AMPLI. Volume and tone can be memorized).
- Visible ringing indicator on top and side of the base.
- Extra loud ringer with 3 levels adjustment (up to +30dB with the HD MAX and up to +40 dB for the HD MAX AMPLI).
- The HD MAX AMPLI features a full hands free speakerphone mode (AC adaptor included).

HD MAX SOS

- DECT technology cordless pendant for initiating emergency calls or for answering incoming calls in a full handsfree speakerphone mode. IP 54 protected (dust and water).
- Pendant comes with ringer, vibration device and flashing leds to signal all incoming calls.
- A pre recorded SOS message is delivered to the emergency call list numbers (up to 5 different numbers) in loop (up to 5 loops) until an identified answer stops the sequence (to avoid answering machines or voice mail systems to stop the emergency call sequence, the answering party is invited to acknowledge the call by entering a code on its keypad). SOS calls are initiated in a hands free speakerphone mode, allowing the answering party a better understanding of the caller's situation.
- HD MAX SOS Telephone base features speakerphone mode and handset, speaker and ringer volume boost (up to +20 dB).
- 4 different pendants can be registered on one HD MAX SOS Telephone base.
- Backlighted keypad with high sized letters and digits
- Caller ID display (if supplied by the operator and forwarded by the PABX) and caller's number vocal announcement.
- Talking keypad feature.
- 2 one touch memory keys + 1 SOS key for initiating the emergency call message from the base.
- Intercom between base and pendant with transfer and 3 party conference mode.
- Date, time and conversation timer display.
- Scrolling menu for pendant and base ringer selection.

HD MAX PHOTOS

• 9 one touch memory keys with a clear and simple photo or icon identification.

• Large high visible keypad.

• Same volume, ringer and tone adjustments than the HD MAX.

• Eeprom memory backup and PIN code memory protection

(no unfortunate memory erasure, no battery, no AC adaptor needed).
